Data exploration

Motivation

In this section, we **explore** the data from package **palmerpenguins**. A recent publication from the researcher, Dr Kristen Gorman, who shared the data is Connors et al. (2020).

Data

The data are displayed below (first 10 rows) :

```
penguins %>%  
  slice(1:10) %>%  
  knitr::kable()
```

species	island	bill_length_mm	bill_depth_mm	flipper_length_mm	body_mass_g	sex	year

Adelie	Torgersen	42.0	20.2	190	4250	NA	2007

Numerical exploration

There are 344 penguins in the dataset, and 3 different species. The data were collected in 3 islands of the Palmer archipelago in Antarctica.

The mean of all traits that were measured on the penguins are:

```
## # A tibble: 3 x 6  
##   species  bill_length_mm bill_depth_mm flipper_length_mm body_mass_g  year  
##   <fct>          <dbl>         <dbl>          <dbl>         <dbl> <dbl>
```

## 1 Adelie	38.8	18.3	190.	3701.	2008.
## 2 Chinstrap	48.8	18.4	196.	3733.	2008.
## 3 Gentoo	47.5	15.0	217.	5076.	2008.

Graphical exploration

A histogram of body mass per species:

```
penguins %>%
  ggplot() +
  aes(x = body_mass_g) +
  geom_histogram(aes(fill = species),
                 alpha = 0.5,
                 position = "identity") +
  scale_fill_manual(values = c("darkorange", "purple", "cyan4")) +
  theme_minimal() +
  labs(x = "Body mass (g)",
       y = "Frequency",
       title = "Penguin body mass")
```

Warning: Removed 2 rows containing non-finite values (stat_bin).

The end

The 3 species of penguins:
